

1

## Activate Probabilistic Thinking

Activate probabilistic thinking when you deal with the odds

2

## Set the Baseline

Establish the baseline by looking into the past data related to the situation

3

## Determine Key Factors

Determine critical factors that can help you determine the odds

4

## Check the Assumptions

Define the odds of those factors to determine the most probable outcome

Check the assumptions and do the self-correction to make sure that your thinking is not biased

5

## Decide

Decide while remembering that predicting the odds doesn't guarantee a successful outcome but helps mitigate the risk
